

Creating an email account on your Iphone/Ipad or Ipod Touch

This guide will take you through the steps required to set up your email account in the Mail program on the Iphone\Ipad\Iphone. Below are the main details you'll require for your email account.

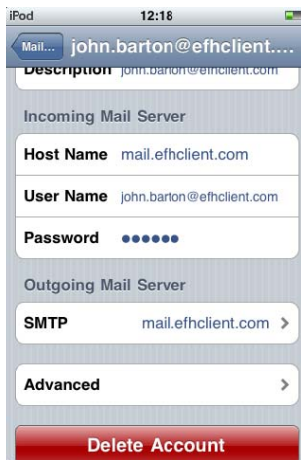

- Your Name: Your Name
 - Email Address: yourname@domain.com
 - Incoming Server: mail.domain.com
 - Outgoing Server: mail.domain.com
 - SMTP requires authentication
1. Click **Settings** then go to Mail/Contacts/Calenders
 2. On the Accounts page, click "**Add Account**" and select "Other" from the list

3. Click the option to "Add Mail Account" and fill in the details required and tap Save
4. Once the account has been found, select the POP option at the top of the page

5. Enter mail.domain.com in the Host Name for the Incoming Mail Server (in this case, my domain is efhclient.com, so I enter mail.efhclient.com)
6. Enter your full email address in the User Name box provided
7. Enter the same Host Name in the Outgoing Mail Server (mail.domain.com) and your email address (in User Name) and password in the boxes provided.

8. Click Save and wait for it to attempt an SSL connection. Select Yes to try the account without SSL.

9. To ensure you don't exceed your mailbox limit, we recommend going to the Advanced setting and changing the option for "Delete from server" from never to "Seven days" or "When removed from Inbox"

10. That's it! Send a test email to another address to ensure it's working correctly.
