

Mac Mail Email Setup

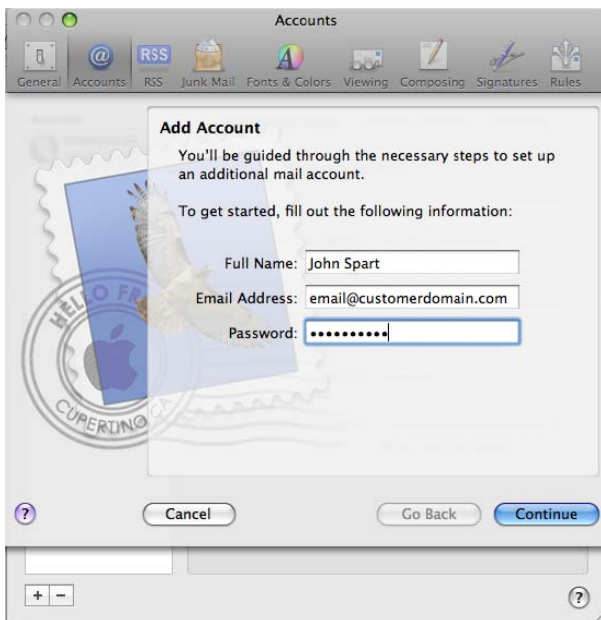

This guide will take you through the steps of setting up an email account in Mac Mail. For quick reference, the main details you will need are outlined below:

- Username/ Email Address: yourname@yourdomain.com
- Incoming Server: mail.yourdomain.com
- Outgoing Server: mail.yourdomain.com
- Requires SMTP authentication

1. Open up Mac Mail and click on **Mail**, then **Preferences**.

2. In the Preferences windows, click the Accounts icon on the toolbar. To create a new account, click the plus button at the bottom of the window. This will start the Add Account wizard. Type your full name, email address and password into the boxes provided. Click Continue.

3. On the next screen, select your account type and type a description. In the Incoming Mail Server, type **mail.yourdomain.com** (replacing yourdomain.com with your own domain/website). Enter your email address in the username field and leave the password box (should already be filled).

4. The next screen will ask for your Outgoing Mail Server details. Copy the details from the Incoming Mail Server (replacing customerdomain.com with your own domain/website) and enter a description. Tick the box that says “Use Authentication” and enter your username and password.

5. If you require SSL turned off after creating the account, find your email account in the Accounts section in Preferences. Click the Advanced tab and untick the box that says “Use SSL”.

If you have any trouble creating your email account, please feel free to contact us at support@eurofasthost.com or telephone 02380 249 823
